

Git config command

Used to configure settings for the current user. It allows you to set various options, including the author name and email address associated with your commits.

```
git config --global user.name "Your Name"  
git config --global user.email "your_email@example.com"
```

Git Init command

The `git init` command is used to initialize a new Git repository in a directory.

```
git init
```

Git add command

This command is used to add one or more files to staging (Index) area.

```
git add Filename
```

Git commit command

This command changes the head. It records or snapshots the file permanently in the version history with a message.

```
git commit -m "Commit Message"
```

Git log Command

This command is used to check the commit history.

```
git log
```

Git status command

The status command is used to display the state of the working directory and the staging area.

```
git status
```
